

MONITORING

WYLERCHART

ÜBERWACHUNG

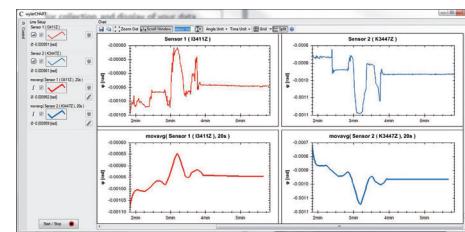

wylerCHART is a preconfigured smaller version of wylerDYNAM. It is designed for simple monitoring tasks using mostly our ZEROTRONIC and ZEROMATIC sensors.

Supported WYLER inclination measuring devices – as shown

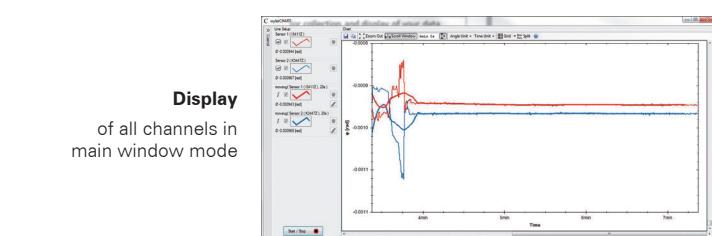

- ZEROMATIC sensor
- BlueCLINO HP
- BlueLEVEL-2D
- BlueCLINO
- Clinotronic PLUS
- ZEROTRONIC sensor

**Functionality**

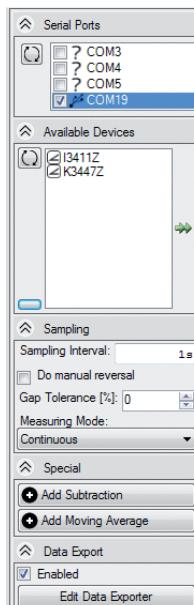

- Reversal measurement
- Data storage and export
- Measurement modes
 - Single
 - Continuous
 - Interval
 - Time-triggered
- Data visualization
- Moving average filtering
- Subtraction

**Display**

of each individual channel
in split window mode

**Display**

of all channels in
main window mode

MONITORING

WYLERDYNAM

ÜBERWACHUNG

wylerDYNAM is the free configurable Version of wylerCHART. It includes wylerCHART and special application setups as "Seatronic". It is designed for all kinds of monitoring tasks using mostly our ZEROTRONIC and ZEROMATIC sensors.

GETTING STARTED WITH TUTORIAL VIDEOS

Four video tutorials help new users getting started with wylerDYNAM.

Vier Video-Tutorials helfen neuen Nutzern beim Kennenlernen von wylerDYNAM

SIMULTANEOUS MEASURING

wylerDYNAM can, thanks to its highly accurate temporal resolution, compare and process measured values from multiple sensors even when the measured object or its foundation are moving.

The exact time of measurement is added to each measured value. This allows the assignment and comparison of values against one another at any given time.

SIMULTANES MESSEN

Durch seine hohe zeitliche Auflösung kann wylerDYNAM gemessene Werte von mehreren Sensoren selbst dann zu vergleichen und verarbeiten wenn sich das Messobjekt oder das Messfundament bewegen.

Jedem Messwert wird mit dem genauen Messzeitpunkt versehen, wodurch sich Messwerte auch zu einem späteren Zeitpunkt einander zugewiesen werden können.

SEATRONIC

A specialised application of wylerDYNAM is the surveillance and alignment of a multitude of systems on a ship.

Equipment such as radar and sonar must be properly aligned against the ships master reference (master datum) for them to work and cooperate with other on board equipment.

wylerDYNAM provides assistance in this usually complex process with a measuring module created especially for this task.

Pitch and roll offsets of the measured equipment can easily be measured and are displayed in a clean and understandable way.

The accurate temporal resolution incorporated in wylerDYNAM allows these measurements not only in dry dock but also while the ship is moored in water.

SEATRONIC

Eine Spezialanwendung von wylerDYNAM ist das Vermessen und Ausrichten von Ausrüstungsgegenständen auf Schiffen.

Damit Anlagen wie beispielsweise Radar und Sonar korrekt mit weiteren Systemen auf dem Schiff arbeiten können müssen diese gegenüber der Hauptreferenz des Schiffs ausgerichtet werden.

wylerDYNAM unterstützt diesen Messvorgang durch ein eigens für diese Anwendung erstelltes Messmodul.

Nach einer einfachen Messung können Nick- und Rollinkelabweichungen festgestellt und korrigiert werden.

Die hohe zeitliche Auflösung von wylerDYNAM erlaubt diese Messungen nicht nur im Trockendock sondern auch während sich das Schiff im Wasser befindet.
